SUBJECT INDEX

Acceptor: for botulinum toxin 25
Acetoacetate: utilization by brain capillaries 429
Acetylation: of lysophosphatidyl choline 359
Acetylcholine release 199
Acetylcholinesterase: association to lipidic membranes 231
association with glycolipid 327
a dimeric form in muscle 327
in mouse skeletal muscle 327
in skeletal muscle 231
Adenylate-muscarinic receptors 517
Adhesion molecules 487
Adrenal medullary cells: in culture 265
Alcohol: and GABAergic transmission 286
and noradrenergic transmission 282
and opioid peptides 290
and serotonergic transmission 284
effect on neurohormone systems 292
effect on neurotransmission 301
relation to neurotransmission 275
Alzheimer-type dementia: changes in serotonin receptors 89
Amino acid analogs: effect on astroglial cultures 105
Amino acids: release from astroglial cultures 557
Antiserum: to mediatophore 207
Arachidonate: incorporation into brain phospholipids 319
Arachidonate incorporation: involvement of deacylation and reacylation 319
Arachidonate metabolism: effect of neurotransmitters 319
Arylakylamine N-acetyl-transferase: inhibition of pineal gland 223
Astrocytes: cultured in high and low serum media 393
Astrocytes in culture: effect of bradykinin 393
effect of vasopressin 393
Astroglial cultures: effect of excitatory amino acid analogs 105
effect of kainate on amino acid release 557
ATPase activity: enhanced by tubulin and Ca^{2+} in MAPS 509
Autoradiography: of serotonin receptors 89

Benzodiazepines: effect on catecholamine release 265
Benzodiazepine-like molecules: in brain 3
Benzodiazepine receptors 1
endogenous ligands 13, 17, 21
effect of ethanol 69
ligands 21
peptides 21
β-carbolines 21
Binding: of botulinum toxin to brain slices 28
of D_1-receptor antagonists 179
of [^{3}H]mepyramine 98
of radioactive α-fenfluramine 345
Biopterin: diurnal levels 549
subcellular distribution 549
Botulinum toxin: acceptors 25
binding to brain slices 28
Bradykinin: stimulate phosphoinositide turnover but not [^{3}H]thymidine incorporation in astrocytes 393
N-Butyl-β-3-carboline-3-carboxylate inhibitors of benzodiazepam binding sites 5

Calcium mobilization: in retinal cells 397
use of Quin2/AM 398
Capillaries: isolated from developing brain 429
utilization of acetoacetate, glucose and D-3-hydroxybutyrate 429
β-Carbolines: inhibitors of benzodiazepam binding sites 5
ligands of benzodiazepines 21
Catecholamine: depletion and accumulation in chromaffin cells 333
release influenced by benzodiazepine 265
Catecholamine accumulation: effect of MPP^+ 333
effect of MPTP 333
Catecholamine depletion: 333
effect of MPP^+ 333
effect of MPTP 333
Chicken neurotropic factor: isolation and characterization 156
Chloride channel protein: of glycine receptor 137
4-Chloro-3-hydroxyanthranilate: inhibits brain 3-hydroxyan thranilate oxidase 405
Choline acetyltransferase: effect of forskolin 37
effect of TPA 37
dibutyryl C-AMP 37
in synaptosomes 119
membrane bound forms in synaptosomes 119
Cholinergic gangliosides: 25
Chromaffin cells: catecholamine depletion and accumulation 333
Chromobindin A 149
Cisternal cerebrospinal fluid: monoamine concentration 353
[^{3}H]clonidine binding: to visual cortex 487
Copper-containing protein in brain 435
Cytosolic calcium: mobilized by receptors linked to phospholipase C 397

D_1 dopamine receptors 159
action on nicotine release of noradrenaline 159
in medium eminence 165
involvement in regulation of LHRH release 165
D_1 receptor antagonists: binding studies 179
DARPP-32: C-AMP regulated phosphoprotein 32
immunoreactivity—in median eminence 165
Deacylation: and arachidonate incorporation 319
Desensitization of 5-HT_2 receptors 409
[^{3}H]desimipramine binding: to visual cortex 483
N-Desmethyldiazepam: in brain 4
Developing brain: isolation of brain capillaries 429
Diazepam binding inhibitor 2
Dibutyrylic-AMP: effect on neurochemistry and morphology of NG108-15 cells 37
[^{3}H]dihydroalprenolol binding: to visual cortex 483
5,7-Dihydroxytryptamine: effect on serotonin system 251
Dopaminergic receptors: relationship with dopaminergic terminals 179
Dopaminergic terminals: relationship with dopaminergic receptors 179
Dopaminergic transmission: effect of ethanol 279
[^{3}H]DPAT binding: autoradiography 90

Ectoenzyme: pyroglutamate amino peptidase II 237
Electric organs: localization of mediatophore 207
Endozepines 2
Enzymoimmunoassay: of γ enolase 243
Estrogen/primed: ovariectomized rat 489

Ethanol: action on GABA/benzodiazepine receptor 69
and dopaminergic transmission 279
Excitotoxins: effect on astroglial cultures 105

Fatty acid probes: studies on synaptosomes 369
[^{3}H]α-fenfluramine: stereospecific binding to rat brain 345
Fluorescent fatty acid probes: studies in synaptosomes 369
5-Fluoromethylornithine: ornithine aminotransferase inhibitor 383
Forskolin: effect on neurochemistry and morphology of NG108-15 cells 37

GABA: control of serotonergic metabolism 455
interrelationship with ornithine and glutamate 383
GABA/benzodiazepine receptor in RNA 449
GABA receptor: effect of ethanol 69
GABAergic transmission: effect of alcohol 286
Galanin immunoreactivity: effect of uridine treatment 501
γ Enolase: enzymoimmunoassay 243
monoclonal antibodies 243
Ganglioside GMI: effect on serotonin system 251
Glucose: utilization by brain capillaries 429
Glutamic acid: inhibits arylalkylamine N-acetyltransferase 223
Glutamate: effect on extracellular potassium activity 439
interrelationship with ornithine and GABA 383
[^{3}H]glutathione binding: distribution in tissues 493
to CNS and PNS 493
Glycine receptor: molecular biology 141
Glycine receptor: pharmacology 138
physiology 138
structure 137
Glycolipid: association with acetylcholinesterase 327
Glycoproteins: 53 kDa 43
uptake by synaptosomes 75
Glycosylated β-galactosidase: uptake with synaptosomes 75
GnRH: release by progesterone hypothalamus 469
serotonin influences release 469

5-HIAA brain levels: effect of phenytoin 379
Histamine: in retina 97
HPLC: separation of MPTP and MPP$^+$ 335
5-HT brain levels: effect of phenytoin 379
5-HT$_2$ receptors: desensitization in cultured aortic smooth muscle cells 409
3-Hydroxyanthranilate oxidase: inhibited by 4-chloro-3-hydroxyanthranilate 405
D-3-Hydroxybutyrate: utilization by brain capillaries 429
5-Hydroxyindole acetic acid levels: postnatal development 252
Hypothalamus: release of GnRH 469

Immobilization stress: effect on pipecolic acid transport 217
Inositol phosphates: linked to quisqualate receptor 463
turnover in ischaemia 63
Interphotoreceptor matrix 81
Interphotoreceptor retinoid binding protein: phosphorylation 81
Iris/ciliary body: muscarinic receptors 517
Ischaemia: action on polyphosphoinositides 63
turnover of inositol phosphates 63

Kainate: releases amino acids from astroglial cultures 557
stimulation of amino acid release 557
53 kDa antiserum: marker for oligodendrocytes 47
53 kDa glycoprotein: in oligodendrocytes 43
surface antigen 43
Ketone bodies: utilization by brain capillaries 429
[^{3}H]ketanserin binding: autoradiography 90

LHRH immunoreactivity: of median eminence 165
LHRH release: involvement of D$_1$ receptors 165
Lipid synthesis: in cultures 111
in oligodendrocytes 111
Lysophosphatidylcholine: 359
acetylation in microsomes 359

MAO: effect of neurotransmitters 319
MAP1 related proteins 57
MAP2 related proteins 57
MAPS: ATPase activity enhanced by tubulin and Ca^{2+} 509
ATPase activity influenced by S-100 protein 509
MAPS = microtubule: associated proteins
Median eminence: D$_1$ dopamine receptors 165
Mediatophore: delipidification 199
immulogical detection 207
lipid requirement 199
translocates acetylcholine 199
[^{3}H]mepyramine binding: to retinal membranes 98
Metallothionein-like protein: in retina 525
Microtubule associated proteins 53
Mismatches: of D$_1$ receptors and dopaminergic terminals 179
Monoamine metabolites: in cisternal cerebrospinal fluid 353
Monoamines: in spinal cord in patients with multiple system atrophy 543
Monoclonal antibodies: to γ enolase 243
MPP$^+$: effect on catecholamine's depletion and accumulation 333
= 1-methyl-4-phenylpyridinium 333
separation from MPTP by HPLC 335
MPTP: effect on catecholamine depletion and accumulation 333
= 1-methyl-4-phenyl-1,2,3,6 tetrahydropyridine
separation from MPP$^+$ by HPLC 335
Müller cell cultures 397
Multiple system atrophy: monoamine levels in spinal cord 543
Muscarinic receptors: in iris/ciliary body 517
L-Quinuclidinyl benzilate interactions 419

NCAM: antibodies 487
NCAM molecules: in human brain 487
Neurite outgrowth: effect of forskolin, TPA and dibutyryl C-AMP 37
Neurohormone systems: effect of alcohol 292
Neuropeptide immunoreactivities: effect of uridine treatment 499
Neuropeptide Y immunoreactivity: effect of uridine treatment 501
Neurotransmission: and alcohol 301
effect of alcohol 275

Neurotransmitters: effects on arachidonate metabolism 319
metabolism by MAO 319
Neurotrophic factor: from chicken neurones 153
NG108-15 cells: effect of phorbol ester, forskolin and dibutyryl C-AMP 37
Nicotine: release of noradrenaline 159
Nicotine treatment: releases noradrenaline 159
Noradrenaline: markers in the visual cortex 481
Noradrenaline release: involvement of nicotine 159
Noradrenergic system: of hypothalamus and preoptic region 159
Noradrenergic transmission: effect of ethanol 282

Oligodendrocytes: from adult pig brain 111
lipid synthesis 111
Ouabain binding: to synaptosomes 119
Opioid peptides: effect of alcohol 290
Ornithine: interrelationship with glutamate and GABA 383
Ornithine aminotransferase activity: resistant to 5-fluoromethylornithine 383
Ovariectimized rat: estrogen primed 469

Peptides: ligands of benzodiazepines 21
Phenytoin: effect on 5-HT and 5-HIAA levels in rats 379
interactions with synaptosomes 369
Phorbol ester: effect on neurite outgrowth 37
Phosphatidylcholine: synthetic and intermembrane transfer activities 531
Phosphatidylinositol: synthetic and intermembrane transfer activities 531
Phosphoinositide metabolism: in astrocytes in culture 393
Phosphoinositide-specific PLC: activation 397
Phospholipid: synthesis and transfer in brain areas 531
incorporation of arachidonate 319
Phosphorylation: of interphotoreceptor retinoid binding protein 81
Pipecolic acid: transport 217
Pipecolic acid transport: effect of immobilization stress 217
PLC = phospholipase C
Polyphosphoinositide: effect of ischaemia 63
Potassium: activity in retina 439
[^{3}H]prazosin binding: to visual cortex 482
Progesterone: stimulation of GnRH from hypothalamus 469
Prostaglandin D_2 synthesis: in cultured astrocytes 475
involvement of protein kinase C 475
Protein: a novel copper containing form 435
Protein kinase C: involvement in prostaglandin synthesis 475
Purines: release from retina 307
Pyroglutamate amino peptidase II: ectoenzyme 237

Quin2/AM: use for calcium detection 398
L-Quinuclidinyl benzilate: interaction with muscarinic receptors 419
Quisqualate receptor: linked to inositol phosphate production 463
new type 463

Reacylation: and arachidonate incorporation 319
Receptors: GABA/benzodiazepine type 449
glycine type 137
quisqualate type 463
benzodiazepine 1
benzodiazepine type 13, 17, 21
muscarinic type 419, 517
serotonin type 89
Retina: effect of glutamate 439
histaminergic components 97
of cyprinid fish 439
a release of purines 307
subcellular distribution of zinc 525
zinc binding protein 525
Retinal cultures: 397
mRNA: injection into *Xenopris* oocytes 449
GABA/benzodiazepine receptor 449

Second messenger: muscarinic receptors negatively linked to adenylate 517
Serotonergic transmission: effect of alcohol 284
Serotonin: metabolism controlled by GABA 455
role in release of GnRH 499
[^{3}H]serotonin binding: autoradiography 90
Serotonin levels: postnatal development 252
Serotonin receptors: in Alzheimer-type dementia 89
in human temporal cortex 89
Serotoninergic systems: effect of GM1 ganglioside 251
= serotonergic systems
Shambling mice: alteration in Substance P levels 261
alteration in TRH levels 261
mutant 261
Somatostatin immunoreactivity: effect of uridine treatment 501
Spinal cord: monoamine levels 543
S-100 protein: action on ATPase activity in MAPS 509
Stearoyl-CoA: [1-palmitoyl]glycerophosphonylcholine transacylase activity—in sciatic nerve 359
Stress: action on pipecolic acid transport 217
Subcellular distribution: of biopterin 549
Substance P: levels in shambling mice 261
Suprachiasmatic area: serotonin/GABA interactions 455
Synaptic junction proteins: 57
MAP1 and MAP2 57
Synaptoneurosomes: presence of quisqualate receptors 463
Synaptosomes: binding of ouabain 122
choline acetyltransferase 119
interaction with phenytoin 369
uptake of glycosides 75
uptake of glycosylated β-galactosidase 75

Tailed acetylcholinesterase: in skeletal muscle 231
Tan protein 149
12-*O*-tetradecanoylphorbol 13-acetate (TPA): effect on NG108-15 cells 37
Trembler mouse: acetylation of lysophosphatidylcholine in peripheral microsomes 359
TRH: concentration in shambling mice 261
metabolism by pyoglutamate amino peptidase II 237
= thyrotropin releasing hormone
Tubulin: enhances MAPS ATPase activity 509

Tyrosine hydroxylase immunoreactivity: effect of uridine treatment 499
in various brain areas of rat 179
of median eminence 165

Uridine: effect on neuropeptide and tyrosine hydroxylase immunoreactivities 499

Vasopressin: stimulates phosphoinositide turnover but not [^{3}H]thymidine incorporation in astrocytes 393
Visual cortex: binding of
[^{3}H]desimipramine
[^{3}H]clonidine
[^{3}H]prazosin
[^{3}H]dihydroalprenolol
[^{3}H]WB 4101 483
noradrenergic markers 481

[^{3}H]WB4101 binding: to visual cortex 483

Xenopis oocytes: injection of mRNA 449

Zinc: subcellular distribution in retinas 525
Zinc binding protein: in retinas 525

PRINTED IN GREAT BRITAIN BY A. WHEATON & CO. LTD. EXETER
